

Prime Minister Donald Tusk's Health Condition Report

RE: Donald Tusk, born on 22nd April 1957

Health Condition Report

At present, the patient does not report any kind of ailments or troubles related to health; no deviations have been recorded during the physical examination, blood pressure correct. In the history: appendectomy, infancy and childhood diseases, no other diseases reported. Negative family history of hereditary disease.

The results of additional examinations and tests performed - resting and postexercise electrocardiogram, chest x-ray, blood morphology and biochemical serum analysis - do not show any symptoms of pathology. The result of the exercise test proves the patient's very good tolerance of physical effort and exercises. The increase in the level of total cholesterol and LDL-cholesterol is noticeable (upper limit value).

Final conclusion: no detectable symptoms of disease, very good physical efficiency and fitness.
